1.1 Descriptive results

1.1.1 Sample

During the duration of the experiment, a total of **XXXX** students consumed at least one meal at the canteen. The majority of students had Italian nationality (**XXXX** percent).

1.1.2 Canteen attendance

?@fig-histogram is a histogram of the number of days during the main study that a student attended the canteen for a lunch meal. Fifty percent of students attended the canteen as most **XXXXX** times, corresponding to $(r \text{ round}(\text{median_attendance}/31 * 100))$ percent of 31 possible days to attend during the main study. One student ate at the canteen on **r max_attendance days**, which was the maximum number of canteen visits during the main study.

TABLE XXXXX summarizes the crude proportions of ordering at least one vegetable item per menu day by vegetable label type, across all menu days of the study.
